The Center for Duchenne Muscular Dystrophy is requesting applications for Pilot and Feasibility Seed Grants

The Pilot & Feasibility (P&F) Program funds studies in the area of skeletal muscle, cardiac muscle or muscular dystrophy research. This year, two to four new grants will be awarded, each for up to $30,000. Studies that advance the mission of the CDMD and those which use at least one Core facility (indicated in the budget) will be given priority.

Scientists and clinicians working on skeletal and cardiac muscle function in health and disease are encouraged to become members of the Center.

Applications may be submitted by April 5th, 2017 at http://www.cdmd.ucla.edu/pages/funding
