The UCLA Dept. of Neurology
is participating in a multi-site research study called:
A Study to Model Rates of Change on Neuropsychological Test Measures in Subjects Diagnosed With Behavioral Variant Frontotemporal Dementia and Healthy Subjects

The purpose of this observational research study is to identify measures of cognition that can predict the progression of bvFTD over 12 months or less.

Eligible participants should be 18-80 years old, with probable bvFTD and must have a caregiver who participates for the duration of the study.

Research Study Procedures:

- Will be for approximately 1 year
- 6 clinic visits in UCLA
- 8 home visits (or other quiet and suitable setting)
- Blood and Urine tests
- Short thinking tests or “brain tasks”
- Caregiver questions

For more information visit [www.ClinicalTrials.gov](http://www.ClinicalTrials.gov), Trial Identifier: NCT03088956
